

Trident[™]

FROM A LOCKSMITH'S POINT OF VIEW

Trident's Bolts into the side of the frame are the greatest invention since sliced bread!

Securitech's Trident[™] has been protecting America's Retail Market for **years** with **thousands installed** across the country. Locksmiths of America endorse it because of their **Ease of Installation, Forced Entry Protection, & Maintenance-Free Operation.**
"Trident[™] is Simply the Best."

Trident? Best invention since sliced bread.

I've installed multi-point locks from Securitech for over fifteen years and the Trident is the easiest and fastest to install. I'd give a Nobel Prize to whoever came up with their metal marking template – It's Genius!

I always recommend the Trident self-locking model – the door closes and boom – the bolts project automatically into the frame. No worrying about whether a store associate remembers to lock the door – when it closes, it automatically relocks.

The best thing about the Trident on single doors is that all the bolts engage into the frame – nothing into the floor. I've seen more problems with that bottom bolt than anything else. From dirt to misalignment... bottom bolts on active doors are nothing but trouble.

Want me to bolt into the floor? Fuhgedabout it! There's usually a large gap between the door and saddle. Sometimes there isn't even a saddle! It's the least secure locking point and the most attacked by thieves, in most cases.

That darn bottom bolt that locks into the floor always gets me out on late night service calls. Someone's trying to lock up and go home and they can't. I haven't had any calls like that with Trident.

My customers also prefer the wall mounted alarms. The siren blasts into the store, not out into the parking lot or back alley. Whoever came up with putting the alarm on the door, anyway? Why would you want to tell people on the outside where they can walk into to the back of a store?

I like to do a job, give the best protection and walk away without call backs. That's why as a locksmith I recommend the Trident - It's the toughest exit lock out there.

- **All moving parts are protected**
Aluminum channels are standard
- **Self-locking ensures smooth locking**
Door automatically relocks when closed
- **Captive key in alarm models**
Key removable only when armed

"Trident ... bolts engage into the frame – nothing into the floor. I've seen more problems with that bottom bolt than anything else. From water to dirt to misalignment... bottom bolts on active doors are nothing but trouble."

MORE FEATURES & OPTIONS THAN ANY OTHER MULT-POINT LOCK

LOCKING STYLES

You Choose What Is Right For Your Facility!

Manual Locking

Lock by pulling the paddle when the door is in the closed position.

Self-Relocking

The door locks itself each time it closes.

All Paddles 1/8" thick aluminum, Not Plastic
Trident Extended Paddle Available

ALARM & NOTIFICATIONS

Keep The Siren Blaring Inside, Not In The Parking Lot or Rear Alley.

Trident alarms are all wall mounted and snap into the Trident via a stainless steel armored cable. That sets Trident apart from all other exit locks.

Alarms feature twin 95 db piezo alarms and are reset by key (mortise cylinder required).

Choices include: 9volt battery only, 110v direct power, signal only (alarm by others), digital counter or no alarm.

Wall Mounted Alarm With Direct Power

EXTERIOR UNLOCKING & KEYED ENTRY OPTIONS
