

CLASSROOM INTRUDER PROTECTION

The First Classroom Intruder Lock To Give
Students The Security & Protection Of
Instant Deadbolt Locking

QID!

Quick Intruder Deadbolt

Mortise Model

The QID intruder lock is designed to provide maximum deadbolt protection when an intruder is identified within the school. We deadbolt our homes against forced entry; Why wouldn't we deadbolt our children's classrooms to better withstand an attack?

Simple Locking

One simple push of the button below the lever assures the teacher that their door is properly secured. This one punch approach allows the teacher to instantly focus on either sheltering in place or evacuation of the children. Precious seconds and minutes are saved with this system.

Everyday Use

The QID works as a regular classroom function lock for everyday use, and jumps to deadbolt and lock the door for emergency use. QID series locks can retrofit to existing doors or be used in new construction.

Cylindrical Model
